The section on extension work held a joint session with the American Association of Farmers' Institute Workers, at which Dr. A. C. True took up the question of the use of the Smith-Lever fund for farmers' institutes as a phase of extension work. In this he drew attention to the strictly educational character of the extension work contemplated by the act and the great stress laid on practical demonstrations. The farmers' institutes, therefore, come within the provisions of the law only so far as they may be agencies through which the colleges can carry on work of this type. Where the institute system is directly connected with the colleges it is believed that they may be easily modified and restricted in scope so as to give them a distinctive place in the extension system. In states where the institutes are under the direction of other agencies, their maintenance apparently does not come within the provisions of the law, though there may be cooperation and participation by the college staffs. The eventual establishment of a county agent system will also affect the Conditions as to farmers' instisituation. tute administration at present vary so widely in different states that apparently the first need is a standardization of the institute.

The relation of farmers' institutes to organized extension agencies was also discussed by G. I. Christie, of Indiana. He believed that the institute is fulfilling a practical need but should be correlated with other extension work and brought under the supervision of the colleges.

As an example of a model farmers' institute address, Director C. E. Thorne, of Ohio, gave a paper on "Maintaining Crop Production." Former Dean L. H. Bailey, of Cornell University, closed the joint session with an address on "The Present Responsibility of the Rural People." This had special reference to the conditions brought about by the European war and emphasized the political responsibility of rural people in the progress of the nation.

The extension section also took up the problem of placing county agents in effective touch with farmers. C. B. Smith, of the States Relations Committee, indicated as among the essentials the employment of a well-trained representative, the making of a complete survey of the agricultural conditions, and the securing of the cooperation of the existing organizations, working through groups wherever possible. C. R. Titlow, of West Virginia, also advocated the utilizing of existing organizations, both official and non-official, and presented a chart showing graphically the correlation of the various agencies.

C. D. Jarvis, of Connecticut, discussed the planning of extension work by means of definite written projects, favoring in addition to the federal requirements a seasonal schedule for workers. K. L. Hatch, of Wisconsin, submitted a report from the committee on the training of extension teachers, advocating the provision of technical training along the special line of prospective extension work and instruction in the art of teaching. He suggested that the time necessary for this training might be secured by eliminating requirements of foreign languages and mathematics. Teachers of approved ability in secondary agricultural schools were suggested as a promising source of supply for extension work. The officers elected for the ensuing year were R. D. Hetzel, of Oregon, chairman; C. R. Titlow, secretary, and John Hamilton, of Pennsylvania, recording secretary. HOWARD L. KNIGHT
